**Foliveex Calcium-Boro** is a foliar fertilizer based on Calcium chelated with L-amino acids and Boron, plus a natural bioenergetic that promotes the formation of growth units with a lower energy expenditure within the plant. **Foliveex Calcium-Boron** also prevents or corrects deficiencies of both Calcium and Boron.

Boron is a necessary element for the proper development and differentiation of plant tissues, and that together with calcium acts as a regulator of plant metabolism and maintains the firmness and permeability of the cell wall, promoting the proper development and growth of plants.

Boron plays a key role in the absorption of calcium, in its route and its mode of action on the plant, since its absorption and normal plant growth is only possible when there is a balance between the absorption of these two nutrients.

**Recommendations for use**

**Preparation of the mixture:**

It is recommended to fill the tank to half its capacity and then add the recommended dose and shake enough to dissolve it completely, finally finish filling the tank.

**Method of application and dosage:**

Apply a dose of 0.5 to 1 liter in 200 liters of water.

Coffee: 2 applications in pre-flowering and another 2 in post flowering.
Tomato: 4 applications after transplanting, every 15 days.
Chile: 3 applications after transplant, every 15 days.
Cucumber: 10 applications every 15 days.
